RE:

Asbestos Waste Dump in
Paulding Ohio

Environmental Protection Agency
Hazardous Waste Cleanup Program
Washington, D.C.

To the Responsible Administrator;

There exists, in Paulding, Ohio, a site where, for more than 30 years asbestos, lead, copper, and other industrial wastes were dumped.

The site is located on the Grizzly factory 700 West Caroline Street. The plant was abandoned in 1980.

Please contact me if you want further information.

I represent several former employees of the factory.

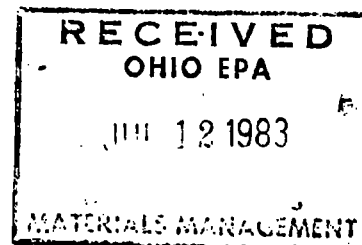

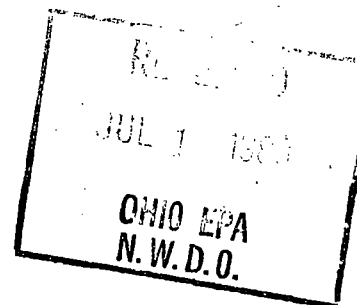

Regards,

Stephen Laudig

FIELD NOTES ON GRIZZLY FACTORY
PAULDING, OHIO
8-16-83

Asbestos piles were apparent, but in small quantities. Much debris around dump site but much of it finished product and asbestos containing intermediates that may or may not be readily air-borne. The dump area is free of vegetation and drains to NE and SW corners. It has a soft, spongy surface and the top 1/2 inch is grayish. It appears raised above surrounding terrain. A ditch runs along the scrubline approximately 50 feet from the fill area. Also drainage off SW corner that drains under gravel road has sediments that are very gray and perhaps contain fibrous material.
